Guide: getting started in cybersecurity

Équipe L’Akadémie · 2026-10-01

A four-step path to understand, practise and build skills.

1. **Understand the basics**: confidentiality, integrity, availability, threats and vulnerabilities (see the course “ISMS and ISO 27001 — The basics”).
2. **Adopt good habits**: passwords, multi-factor authentication, updates, backups.
3. **Practise** on the Cyber Portal, in the NovaChips environments designed for it.
4. **Train** with our cybersecurity and compliance modules.

Reminder: only apply the techniques you learn to systems you are authorised to test.
